

**Criston Software & Dekkers Intermediar partner
to provide integrated Vulnerability and
Configuration Management expertise in Benelux**

Criston Software, major European company in Vulnerability and Configuration Management Solutions and Dekkers Intermediar (D-I), Service Desk & Asset Management Solutions provider today announced their partnership for the Benelux market.

This partnership will deliver fully operational Vulnerability, Patch and Configuration Management solutions to both SMB and large organisations, promoting ITIL based processes and driving compliance standards.

With ten years experience on the market, a large customer base worldwide and offices in Japan, China, England, Germany and France, Criston's solution successfully aligns to business needs and provides an effective framework for the IT units.

"Our experts chose Criston Precision Management Suite because it extends our capabilities to the desktop management space and provides new opportunities in security management", said Willem Jan Dekkers, CEO Dekkers Intermediar. "Criston offers one of the most complete and integrated solutions to complement our services as we support our customers in managing their IT assets, assessing global risk, updating and managing their desktops and servers."

Since the foundation D-I brings comprehensive service desk, desktop - and security management solutions to the technical community. D-I's success is based on the hard work and knowledge of its employees, the quality and value of selected products, and the dynamics of the market it serves.

"We are very pleased that D-I has selected Criston to extend their IT management solution set. This partnership will give customers in the Benelux a great resource to manage the overall IT infrastructure and ease the burden and risk of ineffective patch & vulnerability management," said Marc Vaillant, CEO Criston Software. "The demanding nature of the Benelux market fits perfectly with the maturity of our technology."
