

**Criston and SkyRecon Systems get together to
improve monitoring and security of computing
equipment**

SkyRecon Systems StormShield Security Suite and Criston s Precision Management Suite solutions now combined for more rigorous monitoring of desktops.

SkyRecon Systems, the leading European vendor of client desktop intelligent security solutions, and Criston, the leading European vendor of desktop security and configuration management solutions, today announced the signing of a new partnership agreement.

"We are very pleased with this partnership with Criston, a software publisher that enjoys worldwide recognition. The fact that our solutions complement each other is an all-important plus point that has already made a difference for our joint customers and sets the stage for the success of this collaboration" says Ravy Truchot, CEO of SkyRecon Systems. "This partnership meets the urgent needs for protection expressed by organisations and now enables us to propose a joint, comprehensive, integrated desktop security offering that delivers solutions to the problems associated with protecting and monitoring systems."

Combining the pro-active, integrated desktop security provided by SkyRecon with the vulnerability analysis and software and patch deployment systems provided by Criston will at last equip IT management with all the tools it needs to ensure global, centralised management of the security of its computing equipment.

"Thanks to this agreement, we now have the only integrated European offering for monitoring and protecting computing equipment that meets the market's needs" says Marc Vaillant, Criston's CEO "Reducing IT security risks is fast becoming a top priority for enterprises of all sizes and vulnerability management is a key element of this process. This partnership with SkyRecon Systems emphasises our determination to offer customers a comprehensive vulnerability management solution, from discovery right through to remediation."
