

**Criston significantly reduces IT administration  
costs with the support of Intel® vPro™  
Technology**

## **Criston solutions now take advantage of new hardware-based capabilities for desktop PCs with Intel® vPro™ processor technology to provide IT administrators with extended and powerful facilities to enhance everyday operations success.**

Criston, a leading provider of IT & Security Management Solutions, today announced the support of Intel® vPro™ processor technology by Criston Precision Management Suite.

By adding the support of Intel® vPro™ technology to its set of features, Criston provides businesses with unprecedented control of their IT assets. The solution enables organisations to achieve greater business value from their IT spending.

Intel® vPro™ processor technology is aimed at improving the management and accessibility of PCs. With built-in management capabilities, Intel® vPro™ technology centrally managed by the Precision Management Console, will increase end-user productivity, and improve business continuity.

Assisted by the Intel® Software Partner Program, Criston extended its solution to provide the ability to manage any desktop with Intel® vPro™ processor technology, or any laptop with Intel® Centrino® Pro processor technology, regardless of its state. Criston is able to increase control of the IT administrator on the infrastructure. Even when machines are powered off, non responsive, or without an OS installed, Criston Precision and Intel® vPro™ technology can significantly reduce IT costs by bringing unmanaged pc's under control and thus reducing helpdesk visits.

Criston Precision Management Suite for PC's with Intel® vPro™ technology tracks and manages IT assets across the entire organisation. The combined solution whilst reducing IT costs, also helps enforce the compliance of desktops and laptops, and helps administrators to easily maintain the availability of those assets from a remote location. "The latest Criston Precision Management Suite for PC's with Intel® vPro™ technology represents a major breakthrough for organisations tasked with reducing administration costs. The solution addresses the complexity of managing devices which are switched off or non responsive, by enabling remote power-up, restarting, and booting priority settings" said Haissam Hassan - Criston Product Marketing Manager. "IT Administrators can now accurately discover PCs and get inventories of their hardware assets. This solution also helps organisations address compliance issues in a simple, inexpensive, and non-intrusive way"

### **About Criston**

Founded in 1997, Criston is a leading provider of IT & Security Management Solutions. Security is an inseparable component of IT operations. Based on this concept, Criston believes that "Securing IT starts by Managing IT". On this basis, Criston helps organisations understand the state of their IT infrastructure, assess risk, remediate vulnerabilities and put controls and processes in place to make sure the infrastructure - from servers to desktops and mobile devices - is not only secure and available but also compliant with relevant standards.
