

**Precision Management Suite 6.0 combines
compliance management with vulnerability audit
and configuration management enhancements.**

Criston, a leading provider of IT & Security Management Solutions, today announced the launch of its Precision Management Suite 6.0, addressing the challenge of continuous compliance to policies, recommendations and standards (ISO27001, ITIL, Sarbanes-Oxley etc) through a unique set of operational and security features.

The new module provides consolidated or detailed system status with regards to compliance rules (configuration, security, environment, etc). Precision administrators can directly target non-compliant machines from a dashboard. Moreover, default rule templates ease the assessment of compliance levels with common standards (ISO27001, NIST, SANS etc).

The new version of Precision Management Suite, fully Microsoft Vista compatible, offers powerful risk analysis features, integrating vulnerability score adjustment to business-specific context (CVSS v2 environmental standard). Precision users can now compute environmental scores to assist in determining the impact of vulnerabilities in individual networks.

This new version of Precision also extends IT & Security Management features with the integration of a project management module. Administrators can track the status of ongoing tasks (deployment, incidents, maintenance, scans, etc.) and executive reports provide IT managers with progress measurement and workflow tracking.

Precision Management Suite 6.0 also integrates the following enhancements:

- ✦ Application and device management via black & white lists
- ✦ Fully integrated Windows Vista migration & deployment
- ✦ Customizable network vulnerability tests
- ✦ New Management Console introducing 5 new wizards and dashboards
- ✦ Consolidated Master Server databases

About Criston

Founded in 1997, [Criston](http://www.criston.com) is a leading provider of IT & Security Management Solutions. Based on this concept, Criston believes that "Securing IT starts by managing IT". On this basis, Criston helps organisations understand the state of their IT infrastructure, assess risk, remediate vulnerabilities and put controls and processes in place to make sure the infrastructure - from servers to desktops and mobile devices - is not only secure and available but also compliant with relevant standards. Criston has offices in France, Germany, the United Kingdom, Japan
